

Ultrasonic pest deterrents **MP2B (Birds)**

The MP2B bird repeller offers dual deterrent features, using high frequency, ultrasonic sound to cause auditory irritation and a strobe lamp that flashes randomly for brief intervals adding a visual deterrent. With such very sharp eyesight, the bright flash can cause momentary blindness creating a feeling of vulnerability in birds. An integrated daylight sensor can be set to switch off the sound & strobe through the hours of darkness, other settings are - on only during dark and continuous operation.

The MP2B is suitable for simple installations where the repeller has an unobstructed line of sight of the birds. This is necessary as ultrasonic sound will not penetrate any objects in the path. Effective for up to 50ft (15m) in front of the speaker. Designed for outdoors or indoors, the MP2B is supplied with a mounting bracket allowing it to be mounted and aimed accurately towards the birds or the area to be protected.

- Plug and play install
- Humane bird deterrent
- Intense Sound and Strobe light deterrents
- Designed with specific frequencies to annoy birds
- Up to 15m range in a single direction
- Single speaker design
- Lightweight and can be installed inside or outside
- Includes mounting bracket
- Includes power supply either mains or 12v battery connections
- British designed and built

Specification

- High powered Strobe
- W200 x H150 x D125mm
- 1050g (excludes PSU)
- 12v DC Powered
- 10m Power cable
- Wall mounted
- 1 year warranty

Please Note: If using a battery to power the MP1B-UV then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
