

Ultrasonic pest deterrents **MP3B (Birds)**

The MP3B bird repeller is able to cover a greater area than either the **MP1B** or **MP2B** by emitting high frequency ultrasonic sound from four speakers, each facing a different direction.

As birds have very sharp eyesight, a strobe lamp that flashes for short periods at random intervals adds a visual deterrent. The bright flash can cause momentary blindness creating a feeling of vulnerability in birds, making this device ideal for use in larger open areas where birds can cause problems, such as inside buildings and covered areas. Effective up to 50ft (15m) from the front of the speaker where no obstructions are present. This is important as ultrasonic sound is not able to penetrate any object in the way.

- Plug and play install
- Humane bird deterrent
- Intense Sound and Strobe light deterrents
- Designed with specific frequencies to annoy birds
- Up to 15m range in a four direction
- Four speaker design
- Lightweight and can be installed inside or outside
- Includes power supply either mains or 12v battery connections
- British designed and built

Specification

- High powered Strobe
- W315 x H230 x D235mm
- 1400g (excludes PSU)
- 12v DC Powered
- 10m Power cable
- Floor / ceiling mounted
- 1 year warranty

Please Note: If using a battery to power the MP3B then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
