

## Ultrasonic pest deterrents **MP4B-UV (Birds)**

The MP4B-UV bird repeller offers the most intense scarer sound output, using high frequency, ultrasonic sound to cause auditory hell for the birds. This is a great unit where you have had many years of bird pests and really need them to move on. In addition, ultraviolet LEDs flash sequentially at random intervals giving the impression of movement. Many bird species have sensitivity to ultraviolet light and the LEDs exploit this, creating a visual deterrent effect. Possibly the best single direction scarer out there.

The MP4B-UV is suitable for installations where the repeller has an unobstructed line of sight of the birds. This is necessary as ultrasonic sound will not penetrate any objects in the path. Effective for up to 50ft (15m) in front of the speaker. Designed for outdoors or indoors, the MP4B-UV is supplied with a mounting bracket allowing it to be mounted and aimed accurately towards the birds or the area to be protected.

- Plug and play install
- Humane bird deterrent
- Intense Sound and UV light deterrents
- Designed with specific frequencies to annoy birds
- Up to 15m range in a single direction
- Quad speaker design
- Lightweight and can be installed inside or outside
- Includes mounting bracket
- Includes power supply either mains or 12v battery connections
- British designed and built

### Specification

- 4 x High powered UV LEDs
- W230 x H310 x D130mm
- 1400g (excludes PSU)
- 12v DC Powered
- 10m Power cable
- Wall mounted
- 1 year warranty

**Please Note:** If using a battery to power the MP4B-UV then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
