

Ultrasonic pest deterrents **MP4B (Birds)**

The MP4B bird repeller offers the most intense scarer sound output, using high frequency, ultrasonic sound to cause auditory hell for the birds. This is a great unit where you have had many years of bird pests and really need them to move on. An integrated daylight sensor can be set to switch off the sound through the hours of darkness, other settings are - on only during dark and continuous operation.

The MP4B is suitable for installations where the repeller has an unobstructed line of sight of the birds. This is necessary as ultrasonic sound will not penetrate any objects in the path. Effective for up to 50ft (15m) in front of the speaker. Designed for outdoors or indoors, the MP4B is supplied with a mounting bracket allowing it to be mounted and aimed accurately towards the birds or the area to be protected.

- Plug and play install
- Humane bird deterrent
- Extremely Intense Sound
- Designed with specific frequencies to annoy birds
- Up to 15m range in a single direction
- Four speaker design
- Lightweight and can be installed inside or outside
- Includes mounting bracket
- Includes power supply either mains or 12v battery connections
- British designed and built

Specification

- W230 x H310 x D130mm
- 1400g (excludes PSU)
- 12v DC Powered
- 10m Power cable
- Wall mounted
- 1 year warranty

Please Note: If using a battery to power the MP4B then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
