

## Ultrasonic pest deterrents MPS (Birds)

The **MPS (1 to 4)**, features up to 4 individual speakers which offer you a fantastic way of removing possible sound shadows and offering powerful ultrasonic sound in each direction. The two to five box design makes it easy to mount around an affected area and it is ideal for protecting larger, open areas where birds land and roost.

This device is great in larger open areas where birds can cause problems, such as inside buildings and covered areas. Effective up to 50ft (15m) from the front of each speaker letting you place them around any obstruction that could be blocking the sound. This is important as ultrasonic sound is not able to penetrate any object in the way.

- Plug and play install
- Humane bird deterrent
- Intense Sound
- Designed with specific frequencies to annoy birds
- Up to 15m range in up to four directions
- Single speaker design
- Lightweight and can be installed inside or outside
- Includes power supply either mains or 12v battery connections
- British designed and built

### Specification

- High powered Strobe
- W150 x H120 x D50mm (per unit)
- 1200g (excludes PSU ) (main unit + speaker)
- 12v DC Powered
- 10m Power cable
- Wall mounted
- 1 year warranty

**Please Note:** If using a battery to power the MPS then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
