

## Ultrasonic pest deterrents **MP1F** (Fox & Badger)

The MP1F emits a high level of constantly varying ultrasonic sound to deter foxes and badgers by causing irritation and auditory discomfort. In addition to sound, the MP1F features two flashing red LEDs, creating fear by making the creatures believe there is another animal or predator watching them. A daylight sensor allows the repeller to be used either during the dark, during the day or 24/7 operation. This is useful as both foxes and badgers are primarily nocturnal creatures and the device can be shut off during the daytime.

Designed for outdoor use, the MP1B is effective up to 50ft (15m) from the speaker and is supplied ready for use with a mounting bracket which allows the device to be mounted and accurately aimed at the birds or the area to be protected.

- Plug and play install
- Humane fox and badger deterrent
- Designed with specific frequencies to annoy foxes and badgers
- Up to 15m range in a single direction
- Single speaker design
- Lightweight and can be installed outside
- Includes mounting bracket
- Includes power supply either mains or 12v battery connections
- British designed and built

### Specification

- 2 x High brightness red LEDs
- W150 x H120 x D50mm
- 550g (excludes PSU)
- 12v DC Powered
- 10m Power cable
- Wall mounted
- 1 year warranty

**Please Note:** If using a battery to power the MP1F then use a 12V car or leisure type, either will work but leisure batteries are more suited to this kind of use, and whilst any size of battery will work, consider using a 50ah or greater capacity, this is particularly important if using a solar charger
